Advanced Steel Designer Essex

Description

Advanced Steel Designer | CAD Technician Steel | Architectural Metalwork Designer | Construction | Essex

Up to £75,000 per annum plus pension

Our client is a long-established privately-owned specialist subcontractor, who over a full turn key solution of design, fabrication and installation of architectural metalwork components. They have an impressive client base of tier 1 and 2 contractors and strong order book which has created this new opening for an Advanced Steel Designer to join their inhouse design team.

The role will be predominantly office-based producing drawings using Advanced Steel, CAD, predominantly in 2D but as the use of BIM increases along with client demand, the necessity to produce 3D drawings is key.

Key criteria:

- Previous architectural metal work / manufacturing experience gained in the UK
- Construction Industry experience
- Expert knowledge of Advanced Steel design software
- Ability to produce 3D drawings using Solidworks

Candidates must already be living within a daily commute of their offices in Essex. It's likely you could be from a specialist subcontracting background with experience of taking site measures, producing detailed designs for manufacturer and project managing the delivery on site.

This is rare opportunity to work for a privately owned and operated business who have an excellent name in the industry and can offer long term career prospects and career development.
