

Quantity Surveyor

Description

Quantity Surveyor – Construction – Client Side – London

Up to £450 per day – 18 month assignment

This is exciting and challenging opportunity for a Quantity Surveyor to join a leading name in the Development and Project Management arena. The requirement is for a Project Surveyor or Cost Manager to work on major building projects in London.

You will be part of a small but dynamically managed commercial team who specialise in high end residential and hospitality led projects, with values typically in excess of £200million.

Projects commonly involve a `partnering` arrangement, where the client and the whole project team form a non-adversarial single unit to ensure the effective and efficient management of each project. You will work closely with the appointed Consultants and be the interface for the client, reporting to the Commercial Director.

Additional responsibilities will include preparing cost estimates, appointing specialist subcontractors, change orders, CVR's and managing trade accounts (in particular fit out) to ensure the project is delivered to time and budget.

You will be qualified to degree level (BSc Quantity Surveying or Construction Management) and could be from either a PQS of PM/CM background, similarly a main contracting background.
